

# The AI Boardroom for Every DAO

Submit a proposal. Specialized agents debate it.  
The decision record is stored onchain.

PROBLEM

# DAO proposals go from forum posts to votes without serious review.

## Forum post

Scattered context and assumptions

## Comments

Informal debate with weak structure

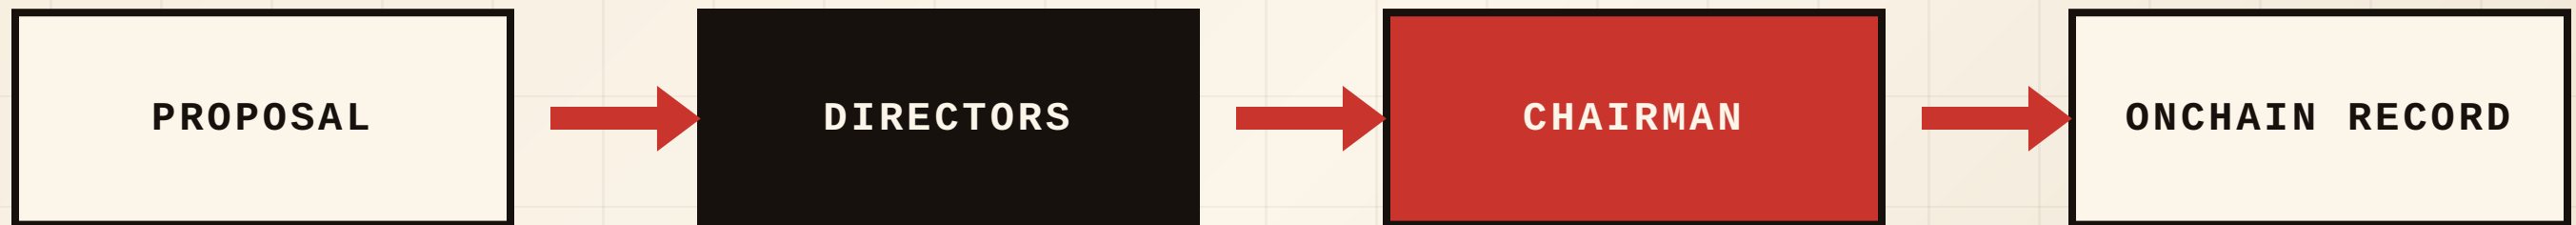

## Vote

High-stakes action with thin review

Treasury transfers, grant approvals, protocol upgrades, and emergency actions deserve a boardroom first.

## SOLUTION

# Conclave turns every proposal into an autonomous council session.

The product feels like presenting to a board of directors, not chatting with a bot.

# Five specialized directors review each proposal from different angles.

## Contrarian

Challenges assumptions

## First Principles

Breaks to fundamentals

## Expansionist

Finds upside

## Risk Officer

Names failure modes

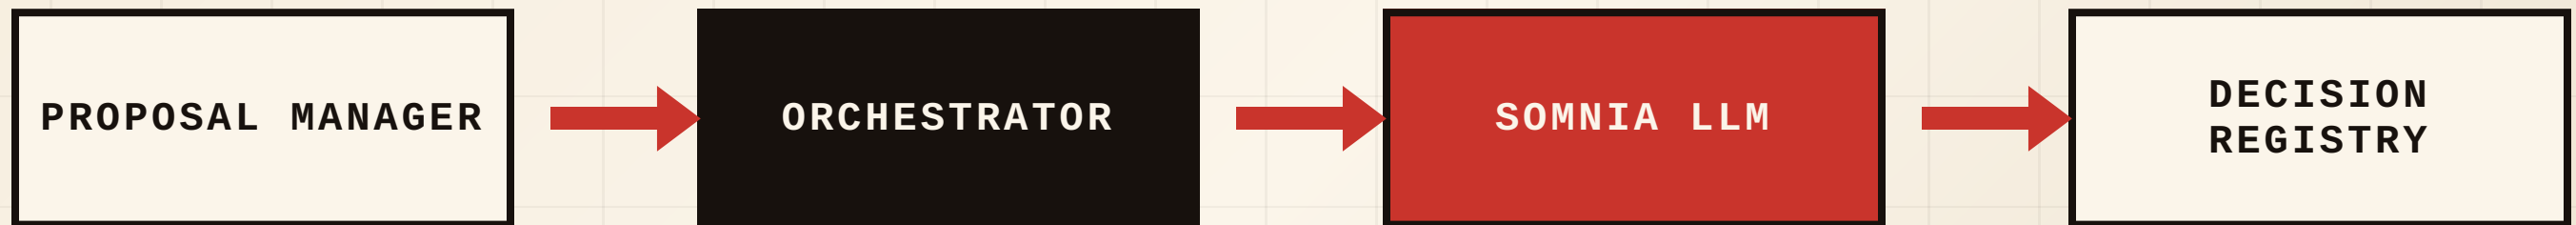

## Executor

Checks feasibility

## Chairman

Synthesizes verdict

# Under the hood, contracts call Somnia agents and store reasoning.

- Onchain proposal creation and council routing.
- LLM inference calls through Somnia's agent platform.
- Callback-based director response storage.
- Decision and archive views linked to explorer receipts.

PROTOTYPE STATUS

# Real proposals. Real callbacks. Real director responses.

## What works today

- Frontend submission flow with wallet and async states.
- Live session page for agent deliberation.
- Decision page with transcript and metadata.
- Archive of past council outcomes.

### Somnia proof

Multiple proposals were submitted live on Somnia testnet. Director responses shown in the demo are real LLM outputs returned through the agent workflow.

WHY IT MATTERS

# Infrastructure should create new governance workflows.

## Treasury

Review large transfers before vote

## Grants

Challenge funding assumptions

## Upgrades

Surface protocol risk early

## Emergency

Prevent rushed authority changes

## Audits

Build an auditable memory

## Pre-Execution

Reason first, act second

CLOSING

# Not a chatbot. Not a dashboard. A boardroom.

The bigger vision: every serious DAO proposal gets a transparent AI board review first.
